

ChimneySaver & CrownSaver

A Powerful Combination

Chimneys are highly exposed to the elements and, if left unprotected, are susceptible to deterioration. **Water damage can be prevented.**

A complete chimney protection program should include repairing the crown with **CrownSaver Crown Repair**, as well as waterproofing the entire chimney with **ChimneySaver Water Repellent**. All flue tiles should have a chimney cap to further prevent water penetration. This combination is your best defense against major reconstruction.

Guaranteed To Last!

**10 Year Warranty
Maintenance Free**

**Natural Concrete/Mortar
Appearance**

CrownSaver®

10 YEAR LIMITED WARRANTY

SaverSystems warrants that CrownSaver Repair Coating against cracks caused by shrinkage of material for a period of ten years. This warranty is in effect if the product is professionally applied to a residential chimney according to printed label directions. This warranty does not cover improper mixing, incorrect application, or other factors beyond the manufacturer's control.

If CrownSaver fails to perform as specified above, the purchaser must give prompt written notice of the defect to the professional from whom the product was purchased. Upon approval, SaverSystems will furnish, without charge, enough CrownSaver Repair Coating to correct the condition as the sole remedy. This warranty does not include labor or cost of labor for the application of CrownSaver. SaverSystems shall not be liable for direct, incidental, or consequential damages. Some states do not allow the exclusion of incidental or consequential damages, so the above exclusions may not apply to you. This warranty gives you specific legal rights. You may also have other rights which vary from state to state.

CrownSaver®
CROWN REPAIR SYSTEM

Deteriorated Crowns Cause Chimney Damage!

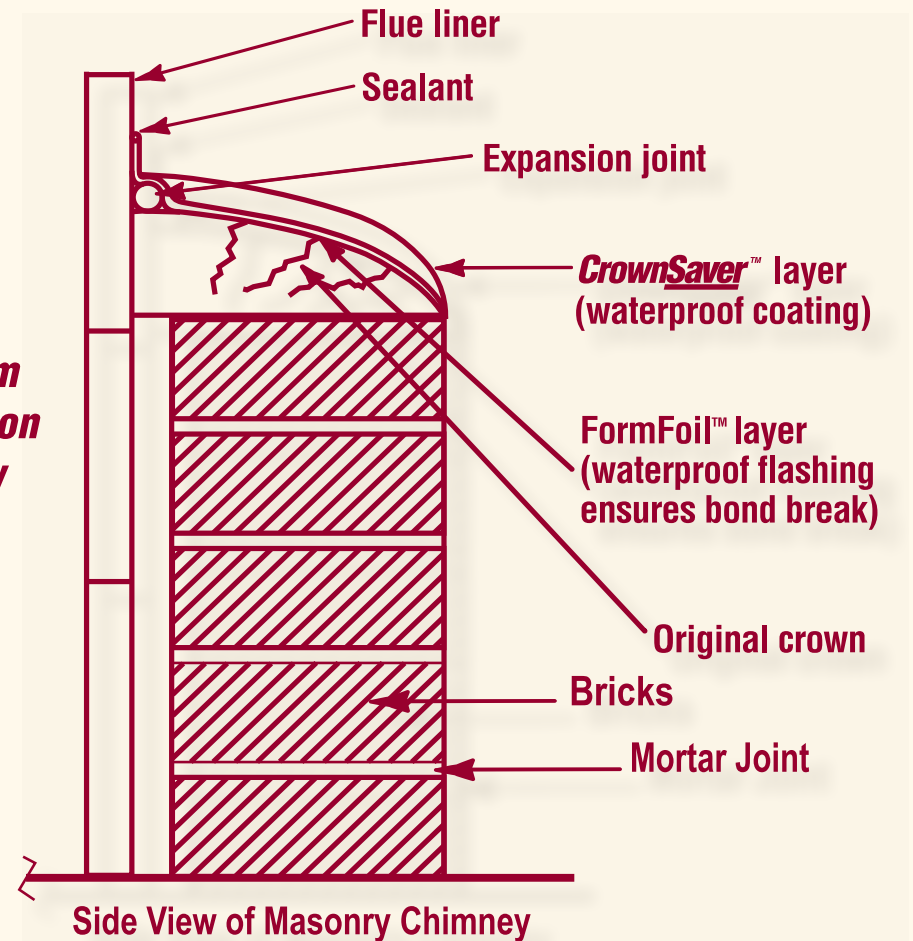

A chimney crown is the masonry covering at the top of your chimney. Its purpose is to prevent water from seeping through to the chimney below. When the crown fails, the entire chimney system is susceptible to damage.

Visible Signs Of Damage Include...

- Cracking Of The Crown
- Cracking Of The Brick
- Spalling (Flaking) Of Brick
- Deteriorating Mortar Joints
- Efflorescence (White Stains)

CrownSaver was developed to prevent the deterioration that results from water penetration and freeze/thaw damage.

CrownSaver Is Your Best Defense.

Using CrownSaver you can renew deteriorated crowns without the hassle and expense of completely tearing them off and rebuilding them. A sure fire, quick way to give you a lasting crown.
